

The ADV-4100EC is a high quality single channel high definition MPEG4/ H.264 encoder. It has a wide range of digital/analog video and audio inputs: CVBS, HD/SD-SDI, HDMI, YPbPr and stereo audio. It can support up to high definition TV up to 1080P. The compressed MPEG4/H.264 signal is output via ASI and IP ports. ADV-4100EC presents a unique function of Time Base Correction to ensure the audio and video synchronization, the feature necessary for the professional TV signal flow.

The ADV-4100EC's re-multiplexing function enables creation of a new transport stream between the TS of encoder and the TS from ASI or IP. The encoder can output SPTS or MPTS over IP as well as over ASI.

Multiple inputs: HDMI, HD/SD-SDI, YPbPr, and CVBS
